

## Sale & Purchase Market Report

For the week of August 28, 2020

The dry bulk sale and purchase market was active this week with smaller size vessels being the most popular assets in the market as the segments are enjoying better supply/demand scenarios.

On new buildings the handysize sector was the healthiest. At present there is activity varying across different size segments and age groups, indicating a strong requirement for dry bulk units.

Tanker S&P deals have been very lively this week, which could be due to the low prices seen in the spot market.

In the secondhand containership S&P market, growth has been observed in the charter market due to which there are a number of negotiations taking place.

The above information is collected from various market sources and is given in good faith. However, we cannot guarantee for its accuracy or completeness.

## NEW BUILDING
